

---

Hi, welcome to Silvia-Perez.com. I am a tarot reader in London, UK, who gives readings in English and Spanish to clients in London and worldwide via Skype chat.

Here are some of the most common problems that people have when they are reading tarot cards:

1) Not being clear about their question or state of mind before shuffling the cards. 2) Not coming up with at least one question to ask before drawing any cards from their deck. 3) Having too many questions pressurizing the reader to deliver the desired result. 4) Not following their preferred method of reading (e.g., free-form or structured). 5) Being afraid to ask the question because they are afraid it may give them a negative answer? Or too shy to say what they want to hear? 6) Too much reading or re-reading of card images before asking the question. 7) Choosing which cards to focus on during their reading, i.e., not remembering clearly enough what cards were important in the past, choosing cards based on what suits one, etc. Here are some useful tips for better Tarot Reading:

1) Prepare your deck ahead of time by shuffling the cards and then cutting off any accidentally drawn cards. 2) Take your deck out of your bag and lay it on a table but do not spread them out. 3) Ensure you have enough room to move around while drawing the cards while facing the table so that you can take a close look at them and ask questions about the images. 4) Stand up and sit down while reading, i.e., do not read from a desk or other fixed place. 5) Ensure that if you have a question, you ask it while looking at the card images. 6) Ask your question while looking at the card images and then step back to see a bigger picture. 7) Focus on one card while asking your question and then look at different cards before coming back to the original one for another look. 8) Put the card on the table so that it is visible from where you sit down. 9) Do not step back to look at all of the cards until right before you do your closing statement. 10) Use the time of your reading to decide what you want to ask, so that you can move onto your question quickly. 11) Pay attention to the order in which you do the readings, e.g., if you are doing free-form or structured, make sure that everything fits together well. 12) If you are doing video readings, make sure that it is very clear what viewers will see (e.g., no one looking at the webcam during the reading). 13) Make sure that all of your aspect cards are put into their usual position (e.g., upright meaning positive meaning if placed upside down). 14) Use audio equipment if possible (e.g.
