## BOGOR BOTANIC GARDENS

### KEBUN RAYA BOGOR

*Kebun Raya Bogor* didirikan pada tanggal 18 Mei 1817 oleh seorang ahli botani asal Jerman bernama Prof. C.G.C. Reindwart. Pada awalnya kebun raya ini dikenal dengan nama "Plantentuin te Buitenzorg" dan berperan sebagai pusat pengumpulan dan aklimatisasi tanaman-tanaman bernilai ekonomi tinggi yang akan dibudidayakan di Indonesia.

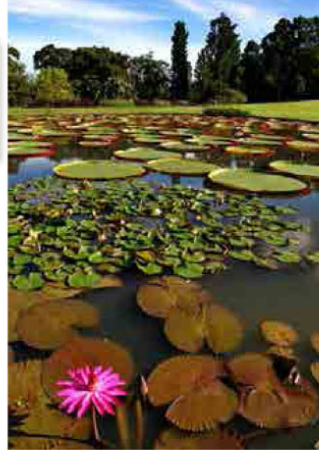

Salah satu contoh tanaman yang paling sukses dibudidayakan di Indonesia adalah *Elaeis guineensis*, atau lebih dikenal dengan nama kelapa sawit, yang berasal dari Afrika Barat. Spesimen pohon kelapa sawit yang dulu ditanam di kebun raya ini merupakan induk tanaman dari semua perkebunan kelapa sawit di Asia Tenggara. Selain kelapa sawit, tanaman penting lainnya yang telah dibudidayakan di Indonesia melalui kebun raya ini adalah tanaman karet dan kina.

Tidak semua tanaman yang dikumpulkan di kebun raya ini dapat beradaptasi dengan iklim di sini, terutama spesies tanaman yang berasal dari hutan dataran tinggi. Untuk mengatasi masalah ini maka didirikan Kebun Raya Cibodas di dataran tinggi Jawa Barat, di lereng gunung Gede dan Pangrango.

#### Lokasi

Kebun Raya Bogor memiliki areal seluas 85 hektar di pusat kota Bogor, Jawa Barat, sekitar 60 km di tenggara Jakarta. Perjalanan dari Jakarta ke Kebun Raya Bogor biasanya memakan 1 jam perjalanan dengan mobil melalui jalan tol Jagorawi.

**Atas:** Kolam di taman Astrid dengan teratai *Victoria amazonica* asal Brazil di antara tumbuhan air lainnya. **Halaman kanan, atas:** Kolam besar di ujung Jalan Kenari 1 dengan refleksi Istana Bogor yang megah. **Bawah, kanan dan kiri:** Pengunjung bisa menjelajahi Kebun Raya Bogor dengan santai dan menyenangkan melalui jaringan jalanan besar, setapak dan jembatan gantung yang diteluhhi pohon-pohon rindang.

Bogor Botanic Gardens was founded by Prof. C.G.C. Reindwart, a German botanist, on 18 May 1817. Initially the garden was known as *Plantentuin te Buitenzorg* and utilized as a center for economically important plants introduced to Indonesia.

One of the best examples of this introduced species is *Elaeis guineensis* (oil palm or kelapa sawit in the Indonesian language) which originally came from West Africa. The living specimen of the species, which had been planted in Bogor Botanic Gardens, later became the mother plant of oil palms in all plantations in Southeast Asia. The oil palm is not the only species introduced to Indonesia through the Bogor Botanic Gardens. The other important species are rubber and quinine.

**Above:** The pond in the Astrid garden is home to the giant lotus, *Victoria amazonica*, a native of Brazil, surrounded by numerous other aquatic plants.

**Right page, above:** The serene pond at the end of Kenari 1 avenue with the reflection of the grandeur Bogor Palace. **Below, left and right:** Visitors can enjoy the Bogor Botanic Gardens at their leisure through endless networks of well maintained avenues, pathways and bridges shaded by tall trees.
